

A scatter plot showing the relationship between the log(First Component) on the x-axis and the log(Third Component) on the y-axis. The data points are categorized by 'withinSubset', with 'rest' represented by red circles and 'true' represented by teal triangles. The plot includes a grid and labels for many individual data points. The 'true' points are generally located at lower values for both components compared to the 'rest' points, which form a dense cluster at higher values.

Legend: withinSubset

- rest (red circle)
- true (teal triangle)
