

A scatter plot showing the relationship between the log(First Component) on the x-axis and the log(Third Component) on the y-axis. The data points are categorized into two groups: 'rest' (red circles) and 'true' (teal triangles). The plot includes a legend on the right side titled 'withinSubset' with corresponding symbols for 'rest' and 'true'. The x-axis ranges from 0.00 to 1.00, and the y-axis ranges from 0.00 to 1.00. The 'true' points are generally clustered in the upper right quadrant, while the 'rest' points are more widely distributed, often overlapping with the 'true' points. Many points are labeled with their respective IDs.
